

Certified Insulation Installer

What is EEC Professional Certifications?

EEC Professional Certifications is an umbrella certification framework, under which multiple certifications sit, including:

- **Certified Emissions Reduction Leader for Commercial Buildings**
- **Certified EnMS Advisor**
- **Certified Insulation Installer**

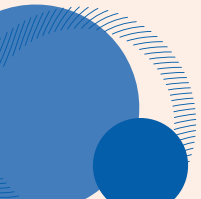

It demonstrates the EEC's ongoing commitment to developing the future energy and related services workforce for Australia.

About this certification

Certification puts installers on a career trajectory of delivering healthy and comfortable buildings in Australia. Get certified to participate in government programs that require certification.

What is a Certified Insulation Installer?

In 2021, the EEC worked with the insulation industry to release the **Roadmap for quality control and safety in insulation installation**. The Roadmap set out actions to ensure insulation is installed following best practice processes for quality control and safety.

Key to this is the Certified Insulation Installer certification, which replace the previous certification scheme administered by the Clean Energy Council. Certified individuals have the knowledge and skills to deliver safe and effective insulation installation.

The Certified Insulation Installer certification is being held by the EEC on an interim basis to enable a review of the certification program and related skills and training needs, as recommended in the Roadmap.

Why get EEC Certified?

Certified Insulation Installers understand the benefits of insulation, and can produce healthy, comfortable homes and workplaces.

Certified individuals have gone the extra mile to demonstrate that they have the skills and experience necessary to safely and effectively install insulation. The buildings certified individuals work on are recognised as more comfortable and cheaper to run.

What levels of certification are there?

Certification as an insulation installer is available for individuals who have completed the insulation installer training and meet the required pre-requisites. Candidates are not required to have previous insulation installation experience.

A Certified Insulation Installer is not required to be a technical expert in every aspect of insulation. Rather, certification indicates that installers have the knowledge, relevant technical expertise, and practical experience necessary to install insulation.

How to apply

You can apply for certification as a Certified Insulation Installer at eecertified.org.au.

Candidates must meet pre-requisites for certification before their application will be considered. Meeting the pre-requisites does not necessarily mean the candidate will be certified, it means that their application will be assessed in detail.

Candidates are not required to have previous insulation installation experience. Candidates should check the certification website to check their eligibility.

Assessment overview

Candidates are assessed against the required knowledge and skills area and must provide evidence that they meet these requirements. The assessment process can be found in the Guide for Candidates.
